Services

ARYANS Info As a client driven company, we respond to our client's business needs faster than our competitor do. ARYANS info consulting services is focused to provide expert advisory & professional services on:

- Web Design, Development & Hosting
- Customized Software Solutions
- Business Application
- Process Outsourcing
- Maintenance & Support

Web Design, Development & Hosting:

Business worldwide is shifting to complex and multitude standards. Subsequently web application development is the need of the hour. Classic Web development can be promoted from knowledge and skills in many areas and attention to apposite planning, deducing analysis, implementing the designs and innovative promotions of the same.

A web development service accomplishment depends on the convincing the ordinary visitors to credible clientele. To make your web dynamic and imperative to potential customers the site should have all the ingredients for addressees to return to the site.

Every time a visitor accesses your web it should have something fresh- news, information, surveys polls and / or a discussion board. Search Engine Optimization is also served and it is very much necessary to attract huge number of visitors.

Customized Software Solutions:

We, at **Aryans Info**, for your business requirements, tailors custom software within preset timeframes and budget. Our engineers have gained competent experience in custom software development effectively managing all major programming languages and technologies.

Custom Software proves to the clientele as value-addition to optimize their business opportunities. Pre designing software project process shortly as the customer provides their requirements; our analyst and managers discuss the minutest of particulars as regards to project requirements.

We draft documents that outline major milestone areas like schedules, cost, technical and functional specifications and software design. Regular interaction with the client and reporting on progress made is given high priority. This ensures scope of application development using technology and its successful implementation with least supervisory skills but maintaining high quality of final software.

Business Application Solutions:

Today's world has cutthroat competition in application development business. Certain packed software is not adequate for companies to meet their ends. At this stage the application development fits in the light of the current demand for quick, inexpensive, high-quality software production for web application development, custom application development, database application development, offshore application development, wireless application development, company application design and development, and many more...

Process Outsourcing:

As more and more projects get completed in outsourced environments, the cutting edge technology associated with their conclusion is morphing to deliver an even higher degree of efficiency. At ARYANS Info we realize that if our clients are to reap the full benefits of outsourcing we have to be in total sync with their requirements and the pressures and deadlines they face. This understanding, coupled with our strict quality standards and constant innovation is leading increasingly complex, business-critical software development projects to us.

Service Area:
- Web design, Development
- Software maintenance and testing
- Data entry

Maintenance & Support:

ARYANS Info provides maintenance and support services to clients. Our maintenance and support team active 24x7.

We provide maintenance service to each our product as well as other product of client. Our expert developer gives perfect solution to each bug if generated by product.

Support team answerable for any query sent by client via mail, call or inquiry form. We charge cost of maintenance service after understanding actual function of application.

ARYANS Info continues to provide value adds to its clients and business partners based on core competency built on focused industry domains and emerging technology platforms. The technical experts and functional analysts form the powerhouse of our solutions delivery practice, who works to understand specific industry business processes, tailor solutions to meet the complex & multilevel needs of our clients business.
